EDUCATION

The University of Hong Kong (HKU) Sep 2022 – Jul 2026
BEng in Data Science and Engineering, Double Major in Finance
HKU Faculty Student Advisor

PROFESSIONAL EXPERIENCE

Make The Right Call, Hong Kong Oct 2026 – Present
Customer Care Officer (Part-Time)
- Managed cross-border customer database accuracy by reaching out to ongoing and prospective Indonesian clients, verifying key account information to directly support active project delivery and data maintenance.

HKU Department of Computer Science, Hong Kong Sep 2025 – Nov 2025
Junior Data Engineer
- Engineered rigorous data-cleansing pipelines for 33.4 GB text-to-SQL relational databases, executing automated data quality validation protocols that reduced data noise by 30% and elevated downstream model training accuracy.
- Optimised relational database consistency and integrity checks, resolving structural anomalies to accelerate cross-table query execution efficiency by 20%.

Bank Central Asia, Indonesia Jun 2025 – Aug 2025
Data Management Intern
- Architected and deployed enterprise ETL pipelines utilizing Informatica PowerCenter to seamlessly integrate fragmented customer data streams into centralized data warehouses.
- Streamlined data access for Marketing, Business Intelligence, and Finance teams by authoring and indexing complex SQL queries, cutting ad-hoc reporting turnaround time by 35%.

Mikro Makro Archilab, Indonesia Jun 2024 – Aug 2024
Administrative Assistant
- Streamlined project tracking and database management by consolidating client information and project metrics into structured Excel repositories, enhancing data accessibility for cross-functional teams.
- Designed and deployed automated Power BI dashboards to track real-time project timelines, status updates, and resource allocation.

PROJECTS

AI Recipe Recommendation System Sep 2026 – Oct 2026
- Built an AI recipe recommendation system in Python and deployed it on Streamlit that turns user-entered ingredients into recipe suggestions tailored to dietary preferences and a maximum cooking time.
- Engineered an automated ingredient-recognition pipeline utilizing multimodal vision models to extract entities from user-uploaded food photos, parsing unstructured outputs into structured JSON schemas for dynamic recipe generation.

Semantic Search Model on HTKVmall Product Data Jan 2026 – May 2026
- Engineered an end-to-end semantic search engine processing over 20,000 product catalogs in Python using Sentence-Transformers (Embeddings) and K-Means clustering, leveraging GitHub Copilot to accelerate development velocity by 30%.
- Evaluated model performance against industry-standard benchmarks, demonstrating a 5.8x relevance score improvement over legacy keyword-based search models.

Regression on effect of Political Affiliation on U.S. State Unemployment Jan 2026 – May 2026
- Formulated a panel regression model analyzing 28,800 monthly observations across 50 U.S. states over 48 years, applying multi-dimensional fixed-effects to isolate the net impact of political alignment on local unemployment.

Data Analysis on MTR Routes in Hong Kong Mar 2024 – May 2024
- Designed an end-to-end data science pipeline in Python to predict MTR fare structures, deploying machine learning algorithms (XGBoost, Random Forest, Support Vector Regression) across multivariate geospatial feature sets.
- Isolated critical pricing anomalies and cost-per-kilometer outliers by executing deep variance analysis between actual fare structures and predictive model outputs.

SKILLS

- **Technical Skills:** Python, Pandas, PyTorch, Scikit-Learn, R, C++, SQL, Git, HTML5, JavaScript, CSS, React.JS
- **Languages:** English (Native), Bahasa Indonesia (Native)
- **Certifications:** Google Cybersecurity Professional Certificate, Microsoft Power BI Data Analyst Professional Certificate
